PPI Software Release 5.1: Notes For REGIONAL Changes

SF50 APPLICATION CHANGES

a. Corrected the SF50 application to insure that the SF50 would not be authenticated unless it was either approved or corrected. Prior to this release, if a user was in the "Pending SF50" queue, and was going to correct the SF50 that he or she was viewing, and had "clicked" on the PERSACTION button and pressed the "cancel" button in PERSACTION, the users name was being updated into block 50 of the SF50.

b. Corrected a short fall within the SF50 "Listing of Accepted SF50s" (print queue) application. Prior to this release only the Regional Personnel Office (CPOC or CCPO) could print the "accepted" SF50s within this application. We have provided the capability to allow the CPOC/CCPO to either print the SF50 for the employee or route the SF50 to the employee's manager for his or her printing. With this change either the CPOC/CCPO will print it or if they choose to forward to a manager. If the CPOC forwards to the manager for printing then they will not be able to print it from this application. They would have to go to the Display Screen "SF50" to print it.

c. Corrected display of SF50 History Screen, if login was "employee". Prior to this release if individual log into the PPI with an "Employee" only login, he or she would get an error when viewing the SF50 History Display screen.

d. Corrected SF50 Refresh application to insure multiple "Correction" SF50's could process in the same refresh if the 2nd NOA is different then the previous corrections and the SSAN and Effective Date are the same. Prior to this release if two "Correction" SF50s on the same person with different 2nd NOAs but the same effective date tired to refresh during the End of Day, only one would load to the SF50 History Table. To make this problem work the 2nd NOA was added as a primary key to the SF50 History and SF50 History Continuation tables.

e. Corrected the backside of the SF50 to insure all data was being printed. Prior to this release in some cases, lines of data were not being printed for the "Pay" and "Block 30" remarks information. Fonts for those lines were not the same font as the rest of the data.

f. Corrected the SF50 application to insure all of Block 39 will be displayed. Prior to this release Block 39 of the SF50 was not "long" enough to display the entire clear text value for this field.

REPORTS MODIFICATION

a. Corrected the Suspense Action Report to select and print those individuals who are on detail. Prior to this release those individuals who were on detail would not be selected on this report.

b. Corrected the display of "Select Criteria" from the Reports application when going to the "Lookup" application. Prior to this release if a user went from the "Select Criteria" screen, then pushed the "Lookup" button and reviewed a table, and then pressed "Exit" button to return to the "Select Criteria" screen, the screen was blank.

c. Corrected the Suspense Action Report to not display dashes in the SSAN of Local National Employees. Prior to this release the SSANs for LNs where in the same format as Civilian Employees (i.e., 555-50-7527 or 666-9T-1136).

d. Corrected the Supplemental Pay Report to display the correct monetary value for German Local Nationals. Prior to this release the report was displaying the decimal point in the wrong position.

e. Corrected the Employee Roster Report to display the correct monetary value to Italian Local Nationals. Also corrected the "Army Family Member" heading on the report. Prior to this release the wrong table was being used to display the monetary value and the heading was not lined up correctly.

f. Corrected the Appraisal Report to display all history and current appraisal information. Prior to this

release if the Organizational code were used in the selection of the report the history appraisals would not be displayed on the report.

g. Corrected the Alpha Roster Report to insure a "manager's" login would not display the entire Date of Birth for his or her employees. Only month and day will be displayed. Prior to this release the year portion of the date of birth was being displayed.

h. Corrected the Regional Application "Queries" to insure that if an individual signed into the Regional Application using a "RM User" only that he or she could select items from this screen. Prior to this release if a "RM User" only selected the Queries Application they would get a "Forms" error not allowing access to these applications.

i. Corrected the Organizational Roster report to display the correct records if the Position NTE Date was used as a selected criteria. Prior to this release if the Position NTE Date was used and the date criteria was 01-OCT-97 to 30-NOV-97 all records that were selected where those individuals with a Position NTE date of the 21st century.

OTHER CHANGES

a. Corrected the Clear Text Window for the "BASE" field on the Performance Improvement/Disciplinary Screen. Prior to this release the clear text window would not show the clear text value correctly.

b. Corrected the Personnel/Position Roster and the Posn_Nte_Date on the Position screen. Prior to this release, on the Personnel/Position Roster the Posn_Nte_Date select criteria was not selecting records correctly when this field was used to select from. The Posn_Nte_Date on the Position Screen was not displaying the 21st Century date correctly.

c. Corrected the display of the Appointment Type on the Basic Employee Information screen. Prior to the release the display of this field was not displaying the entire date.

d. Corrected the Lookup Table application to display table 275 and 578. Prior to this release table 275 was not being refreshed correctly and table 578 was not being refreshed.

e. Corrected display of appraisal information on the Appraisal Data display screen, when signed into Regional Application using an "Employee" login. Prior to this release the Appraisal Data display screen was using the incorrect table for displaying the rating of the appraisals.

f. Corrected the "ADJ-SCD-RIF" date display on the RIF Data display screen. A new appraisal code "R" was added to DCPDS about a year ago but there were no changes made to the ADJ-SCD-RIF field to calculate this change. Prior to this change no value was give to this code, it should have been 12 years
